

CleanCore

Modernizing Smart City Waste Architecture

The Problem

City waste collection runs on fixed schedules. Bins overflow before pickup, half-empty bins burn fuel. CleanCore replaces the schedule with intelligence.

How it works

AI Bin Vision 01

AI reads fill level and waste type from images. No ultrasonic sensors, no hardware retrofit.

Smart Routing 02

Every shift's stops are sequenced for the shortest drive, cutting distance, fuel, and CO₂.

Live Bin Sync 03

Admin and drivers see the same bin status the same second, no refresh, no polling.

Worker Dispatch 04

A bin going critical lands on the right driver's route the moment it's flagged.
